About Me

I am an Electronics Engineering Graduate with experience of more than 2 years of in many Engineering domains Including the Software domain as well as industrial automation. I have done a certified course on Industrial Automation tools such as PLCs, SCADA, DCS, HMI, and many more including its design, documentation, calibration of various field sensors and types of equipment. In my multiple years of expertise in the engineering domain, I have accumulated a vast sense of knowledge and understanding of various tools related to both software and hardware. I have also worked with multiple software firms where I have accumulated hands-on experience in many software tools and languages. Languages such as C++, C, Python, Javascript, Octave GNU are some of them.

I am currently working as a Senior React Front End Developer with active experience in many Javascript 3rd party libraries and react-hooks such as Redux, Bootstrap, React-bootstrap, CSS style sheet, and many of its preprocessors like SASS and SCSS, Tailwind CSS, Web development testing using Jest, Enzymes, React-testing library, Cypress, BDD feature-driven test developments.

Some of my interested domains include Full Stack Software development, Data Science and Machine Learning. I am also excited to work in the Semiconductor based industries in any role in Physical Design, ASIC Design, Validation, or any other role that suits my skill set. I am interested to explore any new exciting opportunities anywhere around the world in any engineering domain suitable to my qualifications.

Skills

Languages	Javascript, Typescript, AMPscript, Python, C/C++, HTML, CSS.
Frameworks & Backend	React.js, Next.js, Angular.js, Node.js, REST APIs, JSON, Salesforce integrations.
Dev & VCS	Git, GitHub/GitLab, CI/CD (GitHub Actions, Jenkins).
Tools & IDEs	VS Code, Jira, Confluence, Figma, InVision, MATLAB.
Data & AI/ML	Theoretical (fundamentals / applied experiments).
Product Management	Roadmapping, Requirement gathering, Prioritization (RICE/MoSCoW), Agile/Scrum, Stakeholder communication.

Experience

The Boeing Company

Bangalore, India

Programming Analyst

Jun 2022 — Present

- Implemented cross-site script injection logic using Javascript and JQuery. Reduced Code redundancy and rework of around 400%.
- Developed customizable components using Angular, Spartacus and Rxjs for e-commerce platforms, attaining over 90% user satisfaction and generating over 200\$ million in revenue.
- Engineered the components for the Spartacus migration from legacy code, Performance impact ensured a 50% Surge in deployment and significantly reduced downtime by over 70%.
- Played a pivotal role in managing and implementing Next-Gen features, gathering requirements and collaborating with many other cross-functional teams of over 300 members.
- Worked with SSJS and AMPscript to develop Salesforce forms, Improving the efficiency of form load and submissions by over 50%.

Associate Software Engineer - UI Developer

Jun 2022 — May 2023

- Implemented cross-site script injection logic using Javascript and JQuery. Reduced Code redundancy and rework of around 400%.
- Developed customizable components using Angular, Spartacus and Rxjs for e-commerce platforms, attaining over 90% user satisfaction and generating over 200\$ million in revenue.
- Engineered the components for the Spartacus migration from legacy code, Performance impact ensured a 50% Surge in deployment and significantly reduced downtime by over 70%.
- Played a pivotal role in managing and implementing Next-Gen features, gathering requirements and collaborating with many other cross-functional teams of over 300 members.
- Worked with SSJS and AMPscript to develop Salesforce forms, Improving the efficiency of form load and submissions by over 50%.

Vanilla Networks

Kerala, India

Software Engineer (Senior Level)

Dec 2020 — May 2022

- Worked on a heavy performance query builder React application, improved the performance of over 200,000 data API response and data plotting interactive charts for data visualization.
- Developed a POC application to give the users a real-time visualization of sensor array readings placed across Geographic locations. Helped to implement logic to increase app efficiency by reducing API call loads and reducing loading time from more than 10 min to less than 5 seconds.

- Developed an MVP application on a multi step form-based user interface used for event tracking and reporting. More than 7 major incidents reported by users and mitigated since the App Launch within a week.
- Frameworks and libraries include: React- Typescript, Material-UI, ArcGis Maps, Lodash, D3.js, React-hook-forms, Scss, Invision, Python-Django.

Attinad software Pvt. Ltd.

Kerala, India

Software Engineer

Dec 2019 — Nov 2020

- Designed and implemented efficient recursive React components for handling an infinite hierarchy data model. The application tool stack including React, Typescript, Lodash, Redux, and Redux Thunk.
- Key member for the development of a sophisticated chart feature, optimizing the visualization of over five data sets over a large period of time.

SMEC Automation Pvt Ltd

Kerala, India

Automation Engineer (Trainee)

Sep 2019 — Nov 2019

- Engineered with automation tools such as PLCs, DCSs, SCADA, and HMIs from renowned vendors such as ABB, Schneider Electric, GE, Yokogawa, and Orion.
- Automated real-world applications, including traffic lights and elevator systems, achieving efficiency improvements by over 30

Projects

Dynamic Content Injection Framework

Vanilla Javascript

- Custom HTML framework without the use of any Libraries like react or Angular.

Content Management system components

Agualr Spartacus

- Draggabble adn droppable.

Multi step form MVP

React typescript

- Multi step form MVP.

Real time visualization of pumps

React Front-end, Arcgis

- Real time visualization of pumps.

Heavy Query Builder Application

React Front-end, Lodash

- Query Builder Application.

Agro - based

React Front-end

- Groguru.

Real time visualization of level control systems using LabVIEW

LabView, DAQ

- Real time visualization of pumps.

Education

A.P.J. Abdul Kalam Technological University

Kerala, India

Bachelor of technology

Aug 2015 — Jun 2019

- strong grounding in sensors and measurement principles.
- Hands-on experience with data acquisition, oscilloscopes, function generators, and multimeters.
- Skilled in calibration, error analysis, and uncertainty estimation.
- Proficient in MATLAB/Simulink, LabVIEW, and Python for signal processing and analysis.
- Embedded systems experience: Arduino, PIC, STM32 for sensing and control.
- Control systems knowledge: PID tuning, modeling, and stability analysis.
- Familiar with PLCs, SCADA basics, Modbus/Profibus, and industrial automation.
- Experience with IoT/telemetry and wireless sensor integration for remote monitoring.
- Strong documentation, teamwork, and project delivery skills.

Course Works and Certifications

Certified SAFe® 6.0 Product Owner / Product Manager - SAFe® | Boeing

Jun 2025

User center design Practitioner - CREDLY | Boeing

Mar 2023

User center design Advocate - CREDLY | Boeing

Jan 2023

Machine Learning - Coursera | STANFORD online

May 2021

Google IT Automation with Python - Coursera | GOOGLE

Mar 2021
